

Personal Portfolio Website Design Document

Project Overview

The goal of this project was to design and develop a personal portfolio website that showcases my professional background, technical skills, projects, and personal interests. The website serves as a central location where potential employers, colleagues, and visitors can learn more about my experience as an AWS Cloud Support Engineer and Software Engineer.

The website was designed with simplicity, readability, and accessibility in mind. The layout focuses on presenting information in a clear and organized manner while maintaining a professional appearance.

The primary audience for this website includes:

- ☐ Recruiters and hiring managers
- ☐ Software engineering professionals
- ☐ Cloud computing professionals
- ☐ Potential employers
- ☐ Academic instructors and peers

The website consists of three pages:

Home Page - index.html

The home page contains:

- ☐ Professional profile image
- ☐ Name and professional title
- ☐ Resume, GitHub, and LinkedIn links
- ☐ About Me section
- ☐ Skills section
- ☐ Projects preview section
- ☐ Footer

Projects Page - projects.html

The projects page highlights technical projects and includes:

- ☐ Project screenshots

- ☐ Project descriptions
- ☐ Technologies used
- ☐ GitHub repository links

Featured projects include:

- ☐ BlackJack AWS
- ☐ AWS Serverless Chat Web App
- ☐ FlashCards Probability

Hobbies Page - hobbies.html

The hobbies page highlights personal interests outside of technology, including:

- ☐ Travel and outdoor activities
- ☐ Technology and innovation events
- ☐ Continuous learning and language development

Design Decisions

The website uses a clean and modern layout with a consistent navigation structure across all pages.

- ☐ Responsive layout using Flexbox
- ☐ Consistent color palette using dark blue and light gray tones
- ☐ Clear visual hierarchy through headings and spacing
- ☐ Project cards to separate project content
- ☐ Simple navigation for ease of use

Technologies Used:

- **Front-End:** HTML5, CSS3, JavaScript (ES6).
- **Development Tools:** Visual Studio Code, Git, GitHub, ESLint, Prettier, [Node.js](#), and npm.

Accessibility Considerations:

The website includes several accessibility features:

- ☐ Semantic HTML elements
- ☐ Descriptive alt text for images
- ☐ Clear heading hierarchy
- ☐ Readable color contrast
- ☐ Keyboard-accessible navigation links

Challenges:

Several challenges were encountered during development:

- ☐ Organizing content across multiple pages
- ☐ Creating a consistent design across the website
- ☐ Structuring project information in a readable format
- ☐ Configuring ESLint and project tooling
- ☐ Implementing responsive design and navigation

Future Improvements:

- ☐ Additional JavaScript interactivity
- ☐ Expanded project portfolio
- ☐ Contact form integration
- ☐ AWS-hosted deployment
- ☐ Additional cloud computing project demonstrations
- ☐ Dark mode support
- ☐ Enhanced mobile navigation

Conclusion

The website successfully presents professional experience, technical projects, and personal interests in a clear and organized format. The project provided valuable hands-on experience with HTML, CSS, JavaScript, responsive design, accessibility, and modern web development tools.

User Personas

Persona 1: Technical Recruiter - Rachel

Rachel is a technical recruiter looking for candidates with cloud computing and software engineering experience. She wants to quickly understand a candidate's background, technical skills, and project experience. Rachel uses the portfolio to review professional qualifications and access GitHub and LinkedIn profiles.

Persona 2: Hiring Manager - Henry

Henry is a hiring manager seeking candidates with hands-on AWS and software development experience. He is interested in reviewing project work, technologies used, and practical problem-solving skills demonstrated through portfolio projects.

Persona 3: Computer Science Student - Sarah

Sarah is a computer science student interested in learning how personal portfolio websites are designed and organized. She visits the website to explore project examples, technical skills, and design ideas for her own portfolio.

User Stories:

User Story 1

As a recruiter, I want to quickly view the author's professional background so that I can determine whether they are a potential candidate for a technical position.

User Story 2

As a hiring manager, I want to review project descriptions and GitHub repositories so that I can evaluate technical skills and project experience.

User Story 3

As a visitor, I want to easily navigate between pages so that I can learn more about the author's projects, skills, and personal interests.

User Story 4

As a fellow student, I want to view examples of portfolio design and organization so that I can gain inspiration for creating my own website.

Design Mockups & Wireframes

The website layout was planned using wireframe sketches before development. The wireframes illustrate the structure of the Home, Projects, and Hobbies pages.
